Web_Assets_by_Neighborhood_Exposure.csv; Main_Summary_Data_Devaluation_by_MSA.csv;

Alec,

I'm looking forward to getting the band back together.

Here's data that we want to feature on some sort of map interactive or profile for the relevant metros—those with at least one majority black neighborhood (tract) and one neighborhood with <1 black share of residents.

We want to show data by neighborhood type and an overall estimate of the devaluation of black homes for neighborhoods that are 50% black compared to those that are 0% black—from regression modelling.

I can over the labels or send a dictionary tomorrow. Here are the main ones in the "Main Summary Data" file.

zil_deval_blk50_3=Devaluation of black homes

kfr_black_pooled_p25=Income rank of black children raised in families at 25th percentile of income distribution.

Racialanimus=Google searches for anti-black term

Dis=black-white segregation, measured as dissimilarity index

Talk soon,
Jonathan
